Subject COMMENTS/ Reference :MCS/ Fw: Microwaves and pesticides
both impair the cholinesterase enzyme [No Protective Marking]

DOCUMENT NOT YET CLASSIFIED

My Additional comments about your NICNAS Report on Multiple Chemical Sensitivity (MCS):

Please read the article below:" Microwaves imitate pesticides." Science has found that organophosphate pesticides and electromagnetic radiation inhibit cholinesterase enzyme leading to severe nervous system disfunction, and thus many of the symptoms of MCS/EMS *(*Electromagnetic sensitivity).

<http://www.stralingsvrijkind.nl/documenten/Bijlage-MicrowavesPesticides.pdf>

My strong advise is to do intensive research to determine which genes , people with MCS/EMS have, that make them so susceptible to develop MCS/EMS upon respectively, Chemical exposures, and Electromagnetic radiations.It is my strong belief that MCS/EMS stem from the same GENETIC origin.This is the very root of MCS/EMS.Anything else are secondary effects of MCS/EMS!

So, no point in wasting time, and efforts trying to find the origin of MCS in wrong avenues, as I strongly believe that it is IN THE GENES, and ANY chemical exposure will trigger MCS in people who have the susceptibility GENES, people with MCS, also have Electromagnetic sensitivity (EMS), due to the same origin and that is GENES variations that make them extremely susceptible to develop MCS/EMS.

However, one thing should be made clear.It is my strong belief that exposures to toxic chemicals are the cause of MCS, in people genetically susceptible, and electromagnetic radiations exposures are the cause for developing Electromagnetic Sensitivity (EMS) in GENETICALLY susceptible individuals!Without these exposures, people who have the susceptibility genes, would not have developed MCS/EMS!

GENETIC RESEARCH IS THE ANSWER TO THE ORIGIN OF MCS/EMS.

That's where the research must be done first! Then, additional research should be done to unmask all the other numerous physiological mecanismes involved!

Very Sincerely,

Christiane Tourtet B.A.
